

Dear Conservative Party Human Rights Commission,

On behalf of DAFOH, Doctors Against Forced Organ Harvesting, I am submitting our report 'Unmasking the COVID-19 Pandemic' for your Inquiry into human rights in China 2016 – 2020.

DAFOH has found that human rights abuses in China are systematically covered in much the same manner that medical tragedies and instances of medical malpractice are.

Unmasking the COVID-19 Pandemic outlines and demonstrates, beyond what would be considered reasonable doubt, that the Chinese Communist Party and Chinese officials have sought to systematically cover up the outbreak of COVID-19 – endangering not only Chinese citizens, but people around the entire world.

Our report introduces The Deception Protocol, which compares and examines the similarities between SARS, COVID-19 and forced organ harvesting. Finding shocking similarities in both the actions of covering up and profiteering from these medical tragedies along with the associated intent behind these actions.

As a result of international inaction over many years on the practice of forced organ harvesting, and viral outbreaks like SARS and COVID-19 we can say that history is repeating itself, with graver and more deadly consequences. This is affording the Chinese Communist Party the brazen confidence to further increase the frequency of human rights abuses, under the belief that the global community will not stand up to China.

DAFOH recommends:

- An immediate, international, transparent investigation into the circumstances surrounding the COVID-19 outbreak and the actions of Chinese officials both before and since this viral tragedy began
- For the United Kingdom to stop trading with China until they stop persecuting innocent citizens for their faith
- To reconsider and end partnerships with Chinese state-controlled organisations like Huawei, who are known to be actively involved in providing technology, that enables Chinese authorities to carry out systematic and ever increasing levels of censorship and persecution
- To enact legislation that prevents British companies, universities or hospitals from actively supporting or working with a medical system in China which is completely devoid of transparency
- To enact legislation that prevents British citizens from knowingly or unknowingly participating in illegal forced organ harvesting

Yours sincerely,

Rob Gray
Deputy Director of DAFOH
